- shall be able to create and distribute Keys and send Invitations to every Session he has the rights to.

- may activate or deactivate Installed Plugins.

- shall be able to request installation of new Plugins.

## Regular User

A Moderator shall be able to restrict privileges of Regular Users, if a Regular User misbehaves like insulting others, uploading inappropriate content or harming the system.

## Regular User

A Moderator shall be able to restrict privileges of Regular Users, if a Regular User misbehaves like insulting others, uploading inappropriate content or harming the system.

A Moderator shall be able to restore privileges of Regular Users.

## Regular User

A Moderator shall be able to restrict privileges of Regular Users, if a Regular User misbehaves like insulting others, uploading inappropriate content or harming the system.

A Moderator shall be able to restore privileges of Regular Users.

A Moderator shall be able to suspend Accounts of Regular Users for a certain amount of time.

## Admin

An Admin User shall be able to test Plugins requested by a Regular User.

## Admin

An Admin User shall be able to test Plugins requested by a Regular User.  
An Admin User shall be able to install tested Plugins.

## Admin

An Admin User shall be able to test Plugins requested by a Regular User.

An Admin User shall be able to install tested Plugins.

An Admin User shall be able to remove previously Installed Plugins.

## Admin

An Admin User shall be able to test Plugins requested by a Regular User.

An Admin User shall be able to install tested Plugins.

An Admin User shall be able to remove previously Installed Plugins.

An Admin User shall be able to add Plugins to a Blacklist, if they may harm the system.

## Admin

An Admin User shall be able to test Plugins requested by a Regular User.

An Admin User shall be able to install tested Plugins.

An Admin User shall be able to remove previously Installed Plugins.

An Admin User shall be able to add Plugins to a Blacklist, if they may harm the system.

An Admin User shall be able to remove Plugins from a Blacklist, if they were accidentally added.

## Devices

The Service should be Touchscreen Compatible.

## Devices

The Service should be Touchscreen Compatible.  
The Service should run on the most popular Browsers.

## Connection/Encoding

The Service should use tunneling if Certain Ports are unavailable

## Connection/Encoding

The Service should use tunneling if Certain Ports are unavailable  
The Website should use UTF-8 encoding

## Performance

The Service should work on Michael's Smartphone

## Performance

The Service should work on Michael's Smartphone  
Sessions Should work with limited bandwidth

## Performance

The Service should work on Michael's Smartphone

Sessions Should work with limited bandwidth

The Service should provide automatic scaling of the size/quality of streams based on bandwidth

## Space

The service should use lossless Codecs to reduce filesize

## Space

The service should use lossless Codecs to reduce filesize  
The service mustn't use more than 20Mb Cache on Mobile Devices.

## Dependability

Login Data and available plugins should be redundant on multiple servers

## Dependability

Login Data and available plugins should be redundant on multiple servers  
Client side Caching should be used to minimize bandwidth consumption

## Security

The service must always use encryption to transmit credentials to the server.

## Security

The service must always use encryption to transmit credentials to the server.  
The service must save the password as a salted hash on the server.

## Security

The service must always use encryption to transmit credentials to the server.

The service must save the password as a salted hash on the server.

The service must provide encryption for transmission of Session data to ensure privacy and to prevent Man-in-the-middle attacks.

## Environmentals

User Accounts are verified through the users email address and password.

# Operational

Account data and Installed Plugins should be backed up frequently to prevent data loss during a server failure

# Operational

Account data and Installed Plugins should be backed up frequently to prevent data loss during a server failure

The service itself, its dependencies (like web server software) and the operating system of the server should be kept up to date. Security holes will be closed by updates.

## Operational

Account data and Installed Plugins should be backed up frequently to prevent data loss during a server failure

The service itself, its dependencies (like web server software) and the operating system of the server should be kept up to date. Security holes will be closed by updates.

The services should have a logfile that lists status messages and errors (server side only). This helps to find/solve problems.

# Operational

Account data and Installed Plugins should be backed up frequently to prevent data loss during a server failure

The service itself, its dependencies (like web server software) and the operating system of the server should be kept up to date. Security holes will be closed by updates.

The services should have a logfile that lists status messages and errors (server side only). This helps to find/solve problems.

The services should offer a test mode to test requested Plugins, without harming the system.

Open source

Open source  
Documented and public available API

No Service side gathering of user data.

No Service side gathering of user data.  
Voluntary data gets Saved but not distributed.

## Software License

Only use of GPL libraries

## Software License

Only use of GPL libraries  
Distibution of code under GPL

The user shall be able to compose and configure Window setups to save them and load them at later points in time

The service should provide the functionality to split a conference into multiple conferences. The service should provide the functionality to merge multiple conferences into a single one.

The service should provide the functionality to set a reminder for appointments and has the option of notifying every user/email that he associates with that appointment

The service should provide the functionality to insert preinstalled and customized emoticons in the chatting plugins

The service should provide the functionality to use a Doodle like plugin to find times for appointments and have the option to set a re- minder.

The service should provide the functionality to use a whiteboard like plugin to freely draw in a session

The service should provide the functionality to create and edit contact lists.

The service should provide the functionality to create Business Cards/Profiles other users can see.

The service should provide the functionality to edit Files online and see edits from other users instantly

The Whiteboard Plugin should have the capability to import pictures to edit and, if the user allows it, give every listener the option of downloading/saving the picture

The service should provide the functionality to mute/disable streams at the will of the user.

The service should provide the functionality to call for a quick vote or simple choice.

The service should provide the functionality to search the web and display the search results to every one who watches the session

The service should provide the functionality to recognize and execute voice commands

The service should provide the functionality for remote desktop recording/viewing.

The service should provide the functionality for client side desktop recording.

The service should provide the functionality to open a chat with at least one other user.

The service should provide the functionality to start audio/video calls with at least one other user.
